

Exploratory Data Analysis

Maneesh Agrawala

Jessica Hullman

CS 294-10: Visualization

Fall 2014

Last Time: Visualization Designs

In-Class Review Rubric

Expressiveness

- Do the mappings show the facts and only the facts?
- Are visual mappings consistent? (e.g., respect color mappings)

Effectiveness

- Are perceptually effective encodings used?
- Are the most important data mapped to the most effective visual variables?

Cognitive Load (Efficiency)

- Are there extraneous (unmapped) visual elements?

Data Transformation

- Are transformations (filter, sort, derive, aggregate) appropriate?

Guides (Non-Data Elements)

- Descriptive, consistent: Title, Label, Caption, Source, Annotations
- Meaningful references: Gridlines, Legend

Assignment 2: Exploratory Data Analysis

Use existing software to formulate & answer questions

First steps

- Step 1: Pick a domain
- Step 2: Pose questions
- Step 3: Find data
- Iterate

Create visualizations

- Interact with data
- Question will evolve
- Tableau

Make wiki notebook

- Keep record of all steps you took to answer the questions

Due before class on Sep 29, 2014

Exploratory Data Analysis

The Future of Data Analysis, John W. Tukey 1962

The last few decades have seen the rise of formal theories of statistics, "legitimizing" variation by confining it by assumption to random sampling, often assumed to involve tightly specified distributions, and restoring the appearance of security by emphasizing narrowly optimized techniques and claiming to make statements with "known" probabilities of error.

The Future of Data Analysis, John W. Tukey 1962

While some of the influences of statistical theory on data analysis have been helpful, others have not.

The Future of Data Analysis, John W. Tukey 1962

Exposure, the effective laying open of the data to display the unanticipated, is to us a major portion of data analysis. Formal statistics has given almost no guidance to exposure; indeed, it is not clear how the informality and flexibility appropriate to the exploratory character of exposure can be fitted into any of the structures of formal statistics so far proposed.

The Future of Data Analysis, John W. Tukey 1962

Set A		Set B		Set C		Set D	
X	Y	X	Y	X	Y	X	Y
10	8.04	10	9.14	10	7.46	8	6.58
8	6.95	8	8.14	8	6.77	8	5.76
13	7.58	13	8.74	13	12.74	8	7.71
9	8.81	9	8.77	9	7.11	8	8.84
11	8.33	11	9.26	11	7.81	8	8.47
14	9.96	14	8.1	14	8.84	8	7.04
6	7.24	6	6.13	6	6.08	8	5.25
4	4.26	4	3.1	4	5.39	19	12.5

Data “Wrangling”

One often needs to manipulate data prior to analysis. Tasks include reformatting, cleaning, quality assessment, and integration

Some approaches:

Writing custom scripts

Manual manipulation in spreadsheets

Data Wrangler: <http://vis.stanford.edu/wrangler>

Google Refine: <http://code.google.com/p/google-refine>

How to gauge the quality of a visualization?

“The first sign that a visualization is good is that it shows you a problem in your data...

...every successful visualization that I've been involved with has had this stage where you realize, "Oh my God, this data is not what I thought it would be!" So already, you've discovered something.”

Friends See All

Melinda Gates Steve Ballmer Mark Zuckerberg William Randolph Bono

Bill Gates
is glad he finally joined facebook and hopes you will too!!! :)
Updated 6 minutes ago

Mini-Feed
Displaying 15 stories See All

Update: **Bill** has posted a note:
Friends, I have finally caved and joined facebook, America's fastest-growing social-networking web site! At first I didn't join because you needed a college alumni address, and I never quite got one... Then when the place started opening up to high schools and corporations, with everyone and his grandmother joining, I wanted in. But by then I was mad I didn't have any shares in this \$15 billion baby... So just now I decided to plunk down \$240 million to buy 1.6% of the company from cool kid CEO Mark Zuckerberg. Sure I saw the potential for ad revenue right away -- but this is wild. I've never had my own Facebook page before!

Don't have a lot of friends yet but I've been running into people... Seeing their status updates... Wow, it's a great place to check up on my employees and my kids! They keep saying what their weekend plans are in their status bars. And of course I love how you can add all these little software applications to the page. Or write your very own!

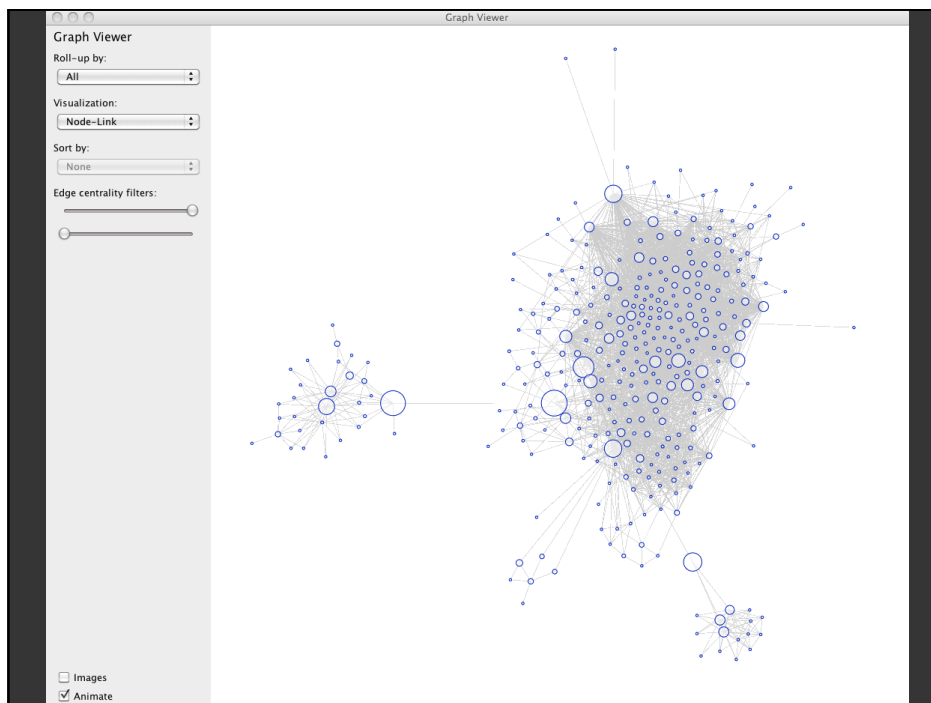

I'm still getting the hang of the whole thing... It seems there are a variety of forums where I can vent to others and display details of my life? O.K.: It wasn't easy being so much smarter than everyone else, pretending to be a grown-up over the telephone so I could get grown-up jobs programming these new things called computers when I was still a child.

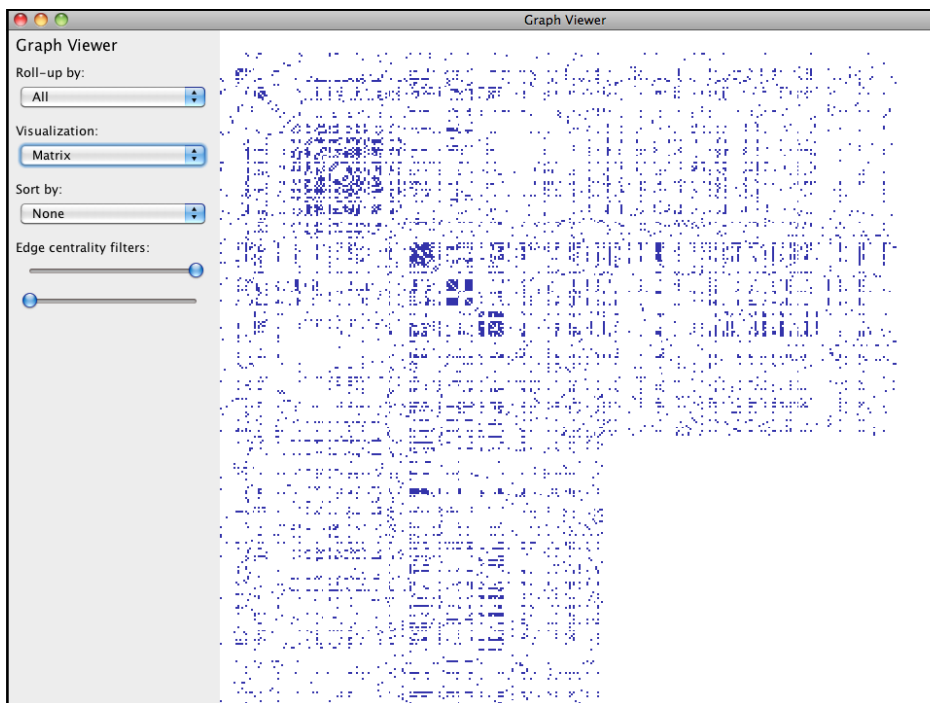

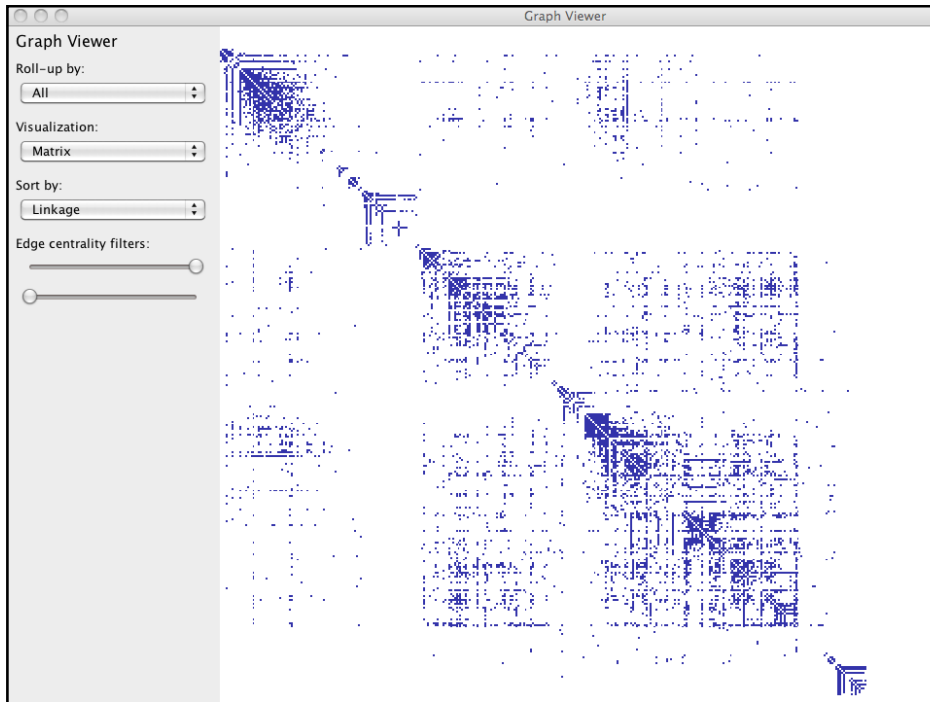

At college I led the anti-social group. Never led a social group, or had a social network... Ha, ha, now I've done even better than that: I've bought a piece of the national friend system! Take that cliquesters. Anyone who ever ignored me in the dining hall... Got friends? I own 1.6% of your friends.

But don't worry about them. Send me a message! Write on my wall!

Bill and Mark Zuckerberg are now friends

Bill and Warren Buffett have joined the group Save the World Now through Creative Capitalism (3 Members)

Data Quality & Usability Hurdles

Missing Data	no measurements, redacted, ...?
Erroneous Values	misspelling, outliers, ...?
Type Conversion	e.g., zip code to lat-lon
Entity Resolution	diff. values for the same thing?
Data Integration	effort/errors when combining data

LESSON: Anticipate problems with your data.
Many research problems around these issues!

Exploratory Analysis: Effectiveness of Antibiotics

What questions might we ask?

Table 1: Burtin's data.

Bacteria	Antibiotic			Gram Staining
	Penicillin	Streptomycin	Neomycin	
<i>Aerobacter aerogenes</i>	870	1	1.6	negative
<i>Brucella abortus</i>	1	2	0.02	negative
<i>Brucella anthracis</i>	0.001	0.01	0.007	positive
<i>Diplococcus pneumoniae</i>	0.005	11	10	positive
<i>Escherichia coli</i>	100	0.4	0.1	negative
<i>Klebsiella pneumoniae</i>	850	1.2	1	negative
<i>Mycobacterium tuberculosis</i>	800	5	2	negative
<i>Proteus vulgaris</i>	3	0.1	0.1	negative
<i>Pseudomonas aeruginosa</i>	850	2	0.4	negative
<i>Salmonella (Eberthella) typhosa</i>	1	0.4	0.008	negative
<i>Salmonella schottmuelleri</i>	10	0.8	0.09	negative
<i>Staphylococcus albus</i>	0.007	0.1	0.001	positive
<i>Staphylococcus aureus</i>	0.03	0.03	0.001	positive
<i>Streptococcus fecalis</i>	1	1	0.1	positive
<i>Streptococcus hemolyticus</i>	0.001	14	10	positive
<i>Streptococcus viridans</i>	0.005	10	40	positive

How do the drugs compare?

Lessons

Exploratory Process

- 1 Construct graphics to address questions
- 2 Inspect “answer” and assess new questions
- 3 Repeat!

Transform the data appropriately (e.g., invert, log)

“Show data variation, not design variation”

-Tufte

Exploratory Analysis: Participation on Amazon's Mechanical Turk

The Data Set (~200 rows)

Turker ID	String
Avg. Completion Percentage	Number [0,1]

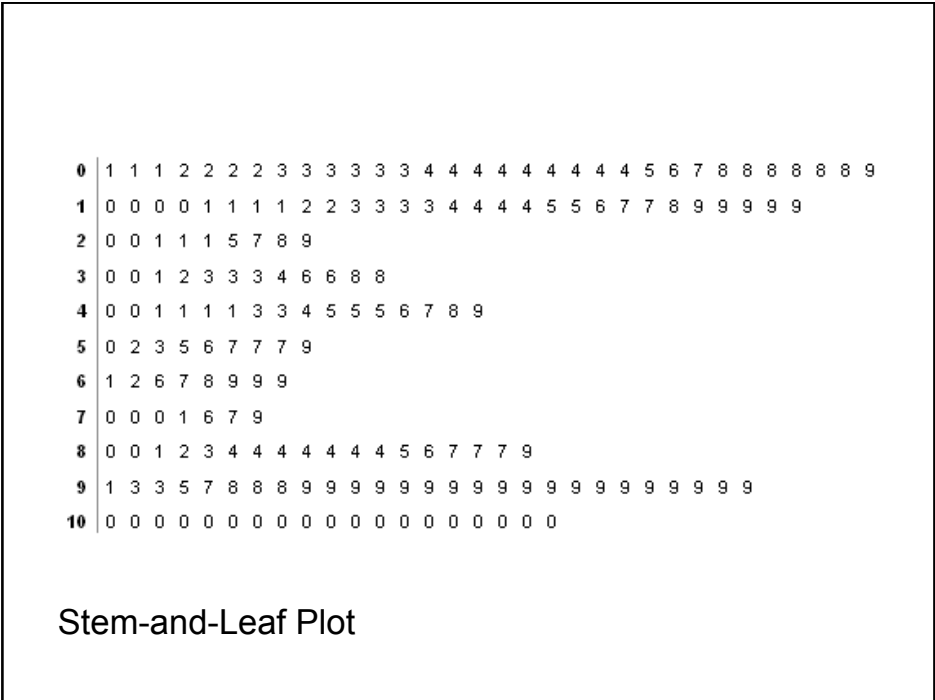

Collected in 2009 by Heer & Bostock.

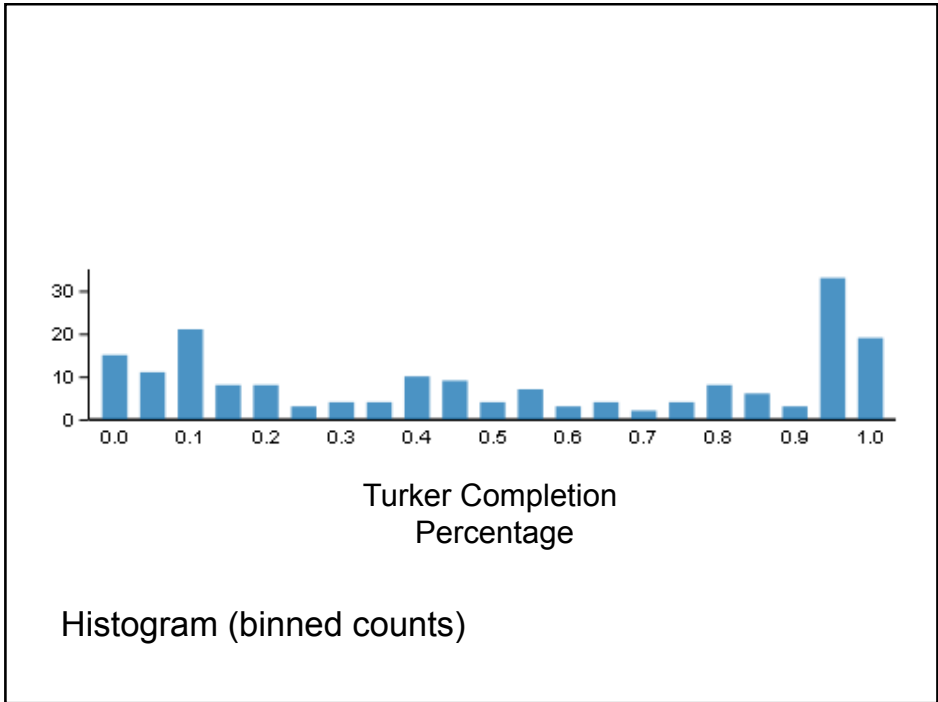

What questions might we ask of the data?

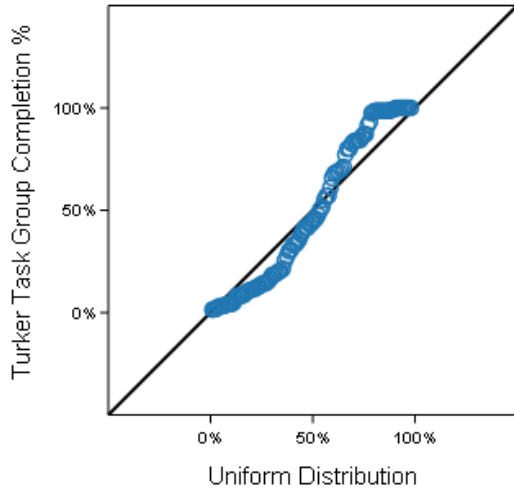

What charts might provide insight?

Dot Plot (with transparency to indicate overlap)

Used to compare two distributions; in this case, one actual and one theoretical.

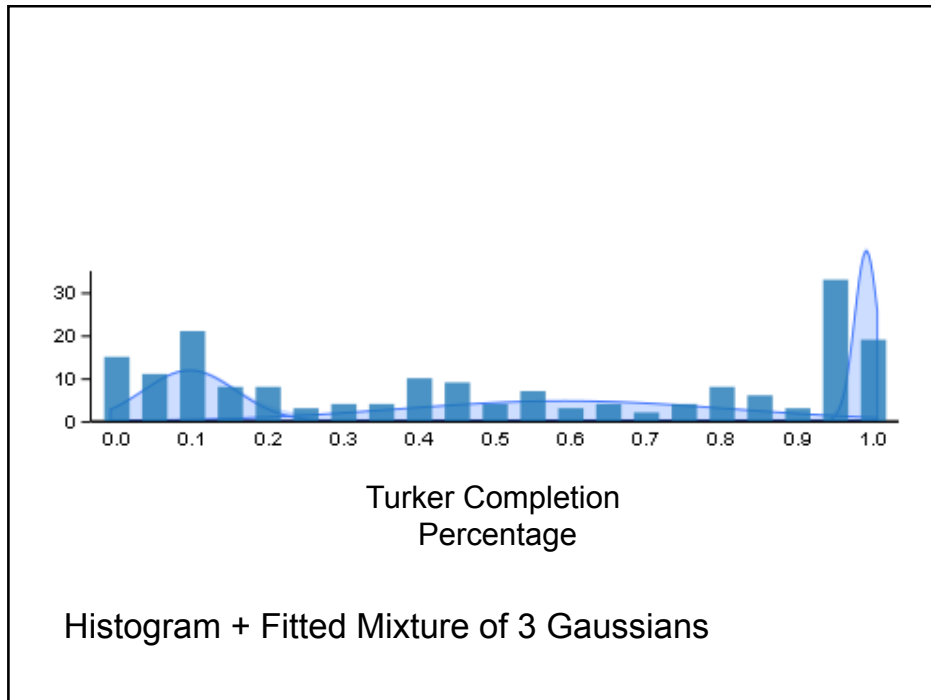

Plots the quantiles (here, the percentile values) against each other.

Similar distributions lie along the diagonal. If linearly related, values will lie along a line, but with potentially varying slope and intercept.

Quantile-Quantile Plot

Quantile-Quantile Plots

Lessons

Even for “simple” data, a variety of graphics might provide insight. Again, tailor the choice of graphic to the questions being asked, but be open to surprises.

Graphics can be used to understand and help assess the quality of statistical models.

Premature commitment to a model and lack of verification can lead an analysis astray.

Confirmatory Data Analysis

Some Uses of Formal Statistics

What is the probability that the pattern I'm seeing might have arisen by chance?

With what parameters does the data best fit a given function? What is the goodness of fit?

How well do one (or more) data variables predict another?

...and many others.

Example: Heights by Gender

Gender	Male / Female
--------	---------------

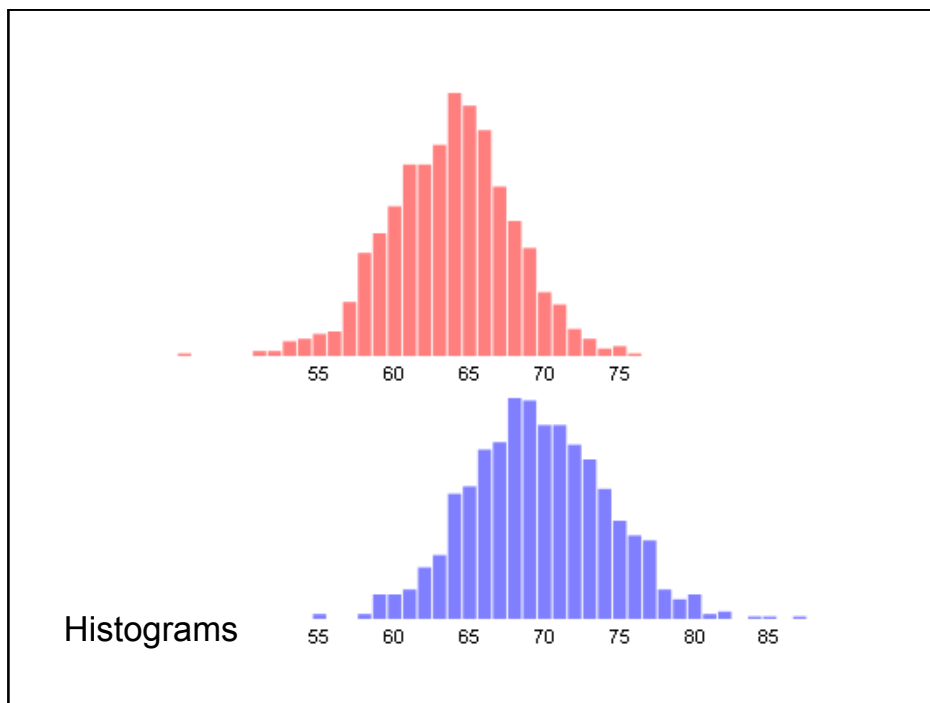

Height (in)	Number
-------------	--------

$$\mu_m = 69.4 \quad \sigma_m = 4.69 \quad N_m = 1000$$

$$\mu_f = 63.8 \quad \sigma_f = 4.18 \quad N_f = 1000$$

Is this difference in heights significant?

In other words: assuming no true difference, what is the prob. that our data is due to chance?

Formulating a Hypothesis

Null Hypothesis (H_0): $\mu_m = \mu_f$ (population)

Alternate Hypothesis (H_a): $\mu_m \neq \mu_f$ (population)

A statistical hypothesis test assesses the likelihood of the null hypothesis.

What is the probability of sampling the observed data assuming population means are equal?

This is called the p value

Testing Procedure

Compute a test statistic. This is a number that in essence summarizes the difference.

Compute test statistic

$$Z = \frac{\mu_m - \mu_f}{\sqrt{\sigma_m^2 / N_m + \sigma_f^2 / N_f}}$$

$$\mu_m - \mu_f = 5.6$$

Testing Procedure

Compute a test statistic. This is a number that in essence summarizes the difference.

The possible values of this statistic come from a known probability distribution.

According to this distribution, look up the probability of seeing a value meeting or exceeding the test statistic. This is the p value.

Lookup probability of test statistic

Normal
Distribution
 $\mu = 0, \sigma = 1$
 $Z \sim N(0, 1)$

Statistical Significance

The threshold at which we consider it safe (or reasonable?) to *reject the null hypothesis*.

If $p < 0.05$, we typically say that the observed effect or difference is statistically significant.

This means that there is a less than 5% chance that the observed data is due to chance.

Note that the choice of 0.05 is a somewhat arbitrary threshold (chosen by R. A. Fisher)

Common Statistical Methods

Question	Data Type	Parametric	Non-Parametric
----------	-----------	------------	----------------

Assumes a particular distribution for the data -- usually normal, a.k.a. Gaussian.

Does not assume a distribution. Typically works on rank orders.

Common Statistical Methods

Question	Data Type	Parametric	Non-Parametric
<i>Do data distributions have different "centers"?</i> <i>(aka "location" tests)</i>	2 uni. dists > 2 uni. dists > 2 multi. dists	t-Test ANOVA MANOVA	Mann-Whitney U Kruskal-Wallis Median Test
<i>Are observed counts significantly different?</i>	Counts in categories		χ^2 (chi-squared)
<i>Are two vars related?</i>	2 variables	Pearson coeff.	Rank correl.
<i>Do 1 (or more) variables predict another?</i>	Continuous Binary	Linear regression Logistic regression	

Graphical Inference

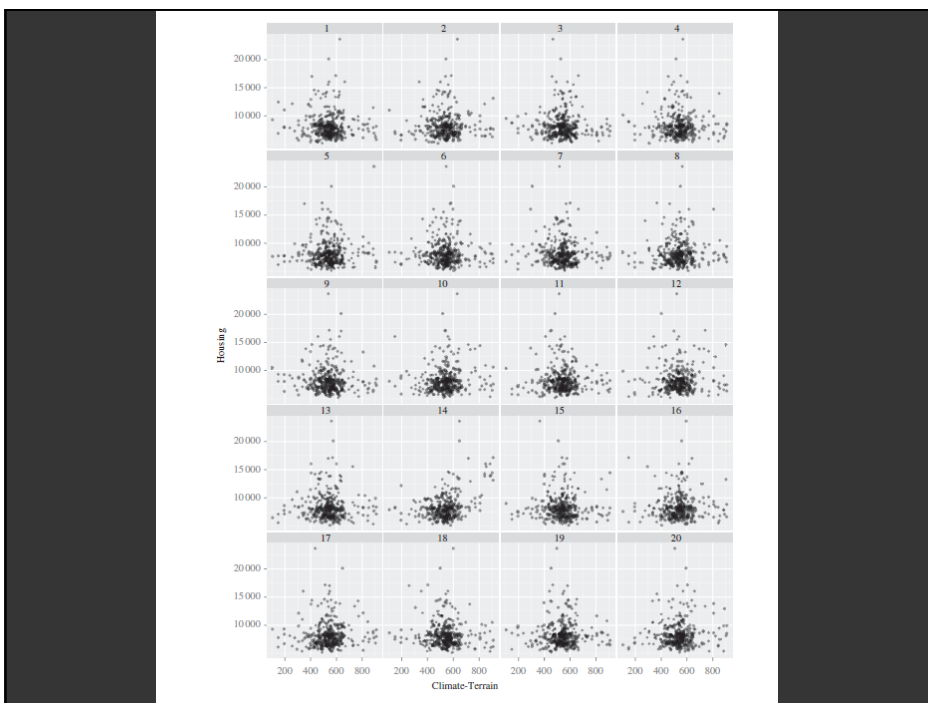

Buja Cook, Hoffman, Wickham et al.

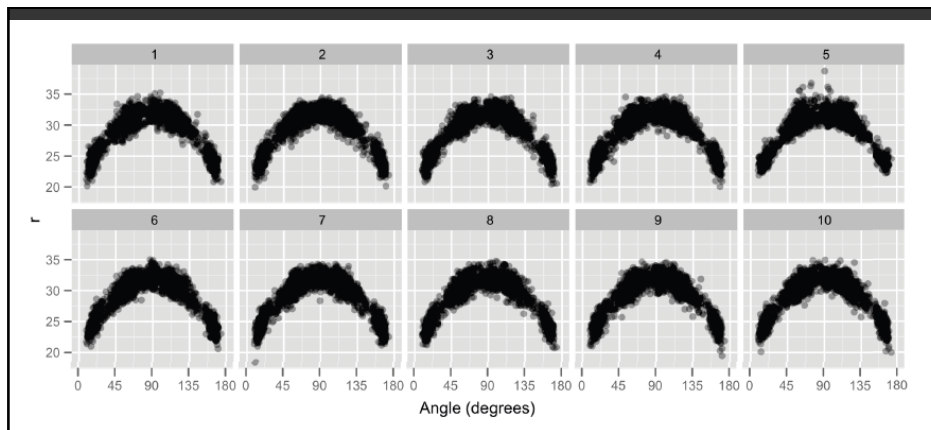

Choropleth maps of cancer deaths in Texas.

One plot shows a real data sets. The others are simulated under the null hypothesis of spatial independence.

Can you spot the real data? If so, you have some evidence of spatial dependence in the data.

Distance vs. angle for 3 point shots by the LA Lakers.

One plot is the real data. The others are generated according to a null hypothesis of quadratic relationship.

Residual distance vs. angle for 3 point shots.

One plot is the real data. The others are generated using an assumption of normally distributed residuals.

Summary

Exploratory analysis may combine graphical methods, data transformations, and statistics

Use questions to uncover more questions

Formal methods may be used to confirm, sometimes on held-out or new data

Visualization can further aid assessment of fitted statistical models
